

Envirowall Wrapped Trims

DESCRIPTION

Envirowall offers the option of wrapped trims to match specified demountable partitions. Available in four different profiles, they are installed after pre-finished gypsum panels are erected. Compared to the more common coloured P.V.C. trims, they provide a more aesthetically pleasing demountable partition.

BENEFITS

- Monolithic
- Uniform
- Re-usable
- Durable
- Economical
- Stock item
- Matches pre-finished gypsum panels

PROFILES

- Wrapped ceiling trim (#4300): attaches to Envirowall ceiling track (#4800) and is designed to finish the wall/ceiling junction.
- Wrapped drive in inside corner (#4340): used to cover gaps at the inside corners of walls. This trim sits almost flush upon installation and is virtually undetectable.
- Wrapped outside corner (#4320): designed to trim outside corner junctions, this battenless trim provides a monolithic, finished appearance.
- Wrapped snap on covers (#4310): designed to attach to various profiles, the wrapped snap on cover can be used to finish inside corners, outside corners, door frames, etc.

COLOUR VARIATION

The compatibility of ingredients in wallcovering varies from batch to batch and conditions such as light reflection and light source may cause minor variations in colour and texture of Envirowall wrapped trims. This condition is common to the industry and is well known to Architects and Interior Designers.

CLEANING

To remove most common dirt and marks, simply rub lightly with a moistened cloth or sponge using a mild soap, detergent or non-abrasive cleaner. Rinse with water and dry. Do not use strong organic solvent cleaners.
